

OUTERSPACE ADVENTURE

AT LUUWIT VIEW PARK

Northwest Family
DAYCATION

Use your imagination on this Daycation and play along with your child as you explore the “extraterrestrial” play spaces of one of Portland’s newest parks.

PROLOGUE: It would seem an extraterrestrial colony has been hiding in plain sight, and it's your family’s mission to unravel the mysteries behind these alien structures!

Space Alien Beacon

It would seem an extraterrestrial colony has been hiding in plain sight, and it's your family's mission to unravel the mysteries behind these alien structures! Commence by climbing to the Martian beacon, where a "Rosetta Stone," or deciphering code, is etched all around its surface, perhaps to make it easier to translate out-of-planet communications?

Spacecraft Picnic Shelter

Climb down and head over to explore the "picnic shelter." Rumor has it that it is actually a spaceship in disguise. Look closely and see what you can find! Be careful not to accidentally launch yourself off into space!

The Laboratory

Next, the laboratory. Here is where we believe many alien experiments take place. You'll find the mini centrifuge, the geodesic trans-materializer, the neutrino slider, and the bottom scrambler.

Subatomic Particle Enhancer

Just a few anti-gravity steps away you'll come upon the sub-atomic particle enhancer. Not long ago a terrible accident occurred and an octahedral molecule grew so big you can now climb inside of it! A containment field was built to make sure it remains stable..

Outer Asteroid Field

Make your way through the Venusian Sands and through Neptune's Mist to reach the Outer Asteroid Field. Once you get to the outermost reaches of this site, you can climb an asteroid, play the most popular sport on Saturn "Pong Ping", or even roll into the 0-Gravity skate park!
